

Why a white certificates system ?

- How do you explain the choice of a WC system in your country ? Based on political or/and economical arguments ?
- Relatively to national context which are the main advantages but also the potential drawbacks/risks of this instrument ?
- How has this choice been accepted by national stakeholders ?

Eligible and obliged agents and the role of the trading

- What is the national choice ?
- Do you think that a market can exist without eligible agents explicitly recognised in the legislation?
- Do the eligible agents (or potential eligible agents in UK) ask strongly to be in the system (e.g. local authorities,...)?
- Do you think that the trading plays an important role ? What for (economical motivation or political acceptability) ?

How to evaluate *ex-ante* energy savings ?

- How is the baseline defined in your country ?
(existing regulation, average consumption of installed stock, average of sales ?)
- How to prevent (or account for) the free-riders effects ?
- How to take into account the evolution of the market (increasing efficiency of the average technology on the market)?
