STEDIN.NET

Remarks @ workshop ECN Petten, July 9, 2008

Albert van der Molen

Opinion

- Nice piece of work
- Good to have a broad inventory available now
- I like the simulation tools overview
- Good that also financial consequences are discussed

- Overall: promising document

Questions/suggestions

- (Preliminary) executive summary (with main conclusions)?

- List of abbreviations highly appreciated

- Suggestion: definition chapter (e.g. smart grid, virtual power plant)

- Curious about p. 27 chapter 3.3.14: user/usability aspects, socio-economic issues, user interfaces, experiences). Isn't that one the key topics to address?

- On p. 53 in first table MWh instead of MW: confusing

- Some typos and grammatical errors
